

**Amendments to the Claims:**

This listing of claims replaces all prior listings, and versions, of claims in the present application.

**Listing of Claims:**

1. (Currently Amended) A method comprising:

- opening a software application in a wireless terminal,
- requesting downloadable content from the open software application,
- automatically starting up a network session,
- transmitting in said network session a request for downloading said downloadable content for the software application,
- ~~receiving~~ downloading said downloadable content,
- enabling a user of the wireless terminal to pre-study said downloaded ~~received~~ ~~downloadable~~ content ~~in full quality and full length~~;
- ~~handling of~~ effecting payment for the pre-studied downloaded ~~downloadable~~ content for the software application for enabling storing of the pre-studied downloaded ~~received~~ ~~downloadable~~ content for the software application without further user interaction beyond selecting the pre-studied downloaded ~~downloadable~~ content for storage, wherein effecting the payment is enabled subsequent to an account verification conducted relative to the user prior to the downloading of said downloaded content, and
- storing of the pre-studied downloaded ~~downloadable~~ content for the software application from which the downloaded ~~downloadable~~ content for the software application was requested in response to ~~handling~~ effecting of the payment.

2. (Original) A method according to claim 1, wherein the requested downloadable content includes at least one of the following items:

- a ring tune,
- a tactile feed back from a vibrator,

- a graphic icon,
- an animation, and
- a new maze or background for a game.

3. (Original) A method according to claim 1, wherein the networks session is a WAP session.

4. (Original) A method according to claim 3, wherein the WAP session is established with a pre-identified content provider.

5. (Original) A method according to claim 4, wherein the user of the wireless terminal has an account at the pre-identified content provider, and wherein the handling of payment for said downloadable content includes transfer of an amount from said account to the content provider upon approval by the user.

6. (Currently Amended) A method according to claim 5, wherein the storing of said downloaded ~~downloadable~~ content is enabled once the user has approved said payment.

7. (Original) A method according to claim 3, wherein the WAP session is established with a pre-identified Internet portal hosting at least one content provider.

8. (Currently Amended) A method according to claim 7, wherein the user of the wireless terminal has an account at the pre-identified Internet portal, and wherein the handling of payment for said downloaded ~~downloadable~~ content includes transfer of an amount from said account to the content provider upon approval by the user.

9. (Currently Amended) A method according to claim 8, wherein the storing of said downloaded ~~downloadable~~ content is enabled once the user has approved said payment.

10. (Currently Amended) A computer program product comprising at least one computer-readable storage medium having computer-readable program code portions stored therein, the computer-readable program code portions comprising:

- a first executable portion for enabling a user to request downloadable content associated with a software application,
- a second executable portion for automatically starting up a network session upon detection of a user entered request,
- a third executable portion for transmitting a request in said network session for downloading said downloadable content to a content source,
- a fourth executable portion for downloading ~~receiving~~ said downloadable content,
- a fifth executable portion for enabling a user of the wireless terminal to pre-study said downloaded ~~downloadable~~ content ~~in full quality and full length~~;
- a sixth executable portion for effecting ~~handling~~ of payment for the pre-studied downloaded content for the software application without further user interaction beyond selecting the pre-studied downloaded ~~downloadable~~ content for storage, wherein effecting the payment is enabled subsequent to an account verification conducted relative to the user prior to the downloading of said downloaded content, and
- a seventh executable portion for storing of the pre-studied downloaded content for use with the software application from which the downloaded ~~downloadable~~ content was requested ~~once payment has been handled~~ in response to effecting ~~handling~~ of the payment.

11. (Previously Presented) A computer program product according to claim 10, wherein the requested downloadable content includes at least one of the following items:

- a ring tune,
- a tactile feed back from a vibrator,
- a graphic icon,
- an animation, and
- a new maze or background for a game.

12. (Previously Presented) A computer program product according to claim 10, wherein the networks session is a WAP session.

13. (Previously Presented) A computer program product according to claim 12, wherein the WAP session is established with a pre-identified content provider.

14. (Currently Amended) A computer program product according to claim 10, further comprising an eighth executable portion for discarding the pre-studied downloaded ~~downloadable~~ content if the user does not select to store the pre-studied downloaded ~~downloadable~~ content.

15. (Currently Amended) A method according to claim 1, further comprising discarding the pre-studied downloaded ~~downloadable~~ content if the user does not select to store the pre-studied downloaded ~~downloadable~~ content.

16. (Previously Presented) A computer program product according to claim 10, wherein the second executable portion includes instructions for providing a plurality of available downloadable items for selection based on a status of an account of the user.

17. (Previously Presented) A method according to claim 1, wherein automatically starting up the network session further comprises providing a plurality of available downloadable items for selection based on a status of an account of the user.

18. (Currently Amended) An apparatus comprising a processor configured to:  
open a software application in a wireless terminal,  
request downloadable content from the open software application,  
automatically start up a network session,  
transmit in said network session a request for downloading said downloadable content for the software application,  
~~receive~~ download said downloadable content,  
enable a user of the wireless terminal to pre-study said ~~received~~ ~~downloadable~~ downloaded content ~~in full quality and full length~~;

~~handle effect~~ payment for the pre-studied ~~downloadable~~ downloaded content for the software application for enabling storing of the pre-studied ~~downloadable~~ downloaded content for the software application without further user interaction beyond selecting the pre-studied ~~downloadable~~ downloaded content for storage, wherein effecting the payment is enabled subsequent to an account verification conducted relative to the user prior to the downloading of said downloaded content, and

store the pre-studied ~~downloadable~~ downloaded content for the software application from which the ~~downloadable~~ downloaded content for the software application was requested in response to effecting handling of the payment.

19. (Previously Presented) An apparatus according to claim 18, wherein the processor is configured to request downloadable content including at least one of the following items:

- a ring tune,
- a tactile feed back from a vibrator,
- a graphic icon,
- an animation, and
- a new maze or background for a game.

20. (Previously Presented) An apparatus according to claim 18, wherein the network session is a WAP session.

21. (Previously Presented) An apparatus according to claim 20, wherein the WAP session is established with a pre-identified content provider.

22. (Currently Amended) An apparatus according to claim 21, wherein the user of the wireless terminal has an account at the pre-identified content provider, and wherein the handling of payment for said downloaded ~~downloadable~~ content includes transfer of an amount from said account to the content provider upon approval by the user.

23. (Currently Amended) An apparatus according to claim 22, wherein the storing of said downloaded ~~downloadable~~ content is enabled once the user has approved said payment.

Appl. No.: 10/084,982  
Amdt. Dated December 2, 2008  
Reply to Office Action of 06/05/2008

24. (Previously Presented) A method according to claim 1, wherein the handling of the payment is based on a pre-existing agreement associated with the wireless terminal directly with an account.
